**QUALITY • AFFORDABLE  
PRIVATE HEALTHCARE**

**The female reproductive system serves to form the ovum and after fertilization, to nurture it until independent life is possible.**

perimetrium  
myometrium  
endometrium  
neck of uterus or cervix  
os  
vagina  
rectum  
perineum  
anus  
vaginal opening or vestibule

**Front view of the uterus showing uterine tubes and ovaries**

fundus of the uterus  
Fallopian tube  
ovary  
body of the uterus  
os  
vagina  
isthmus of Fallopian tube  
ampulla  
peritoneum  
ligament of ovary  
fimbria  
cervix cavity (uterus neck)

**A section through an ovary - Female sex gland**

A section of the ovary showing the stages of development of the Graafian follicle and the corpus luteum.

ovary wall  
egg in developing Graafian follicle  
ruptured follicle develops into the corpus luteum  
follicle bursts setting the ovum free which is called ovulation  
ovum  
egg (ovum) in fully formed Graafian follicle

**Structure of the uterus**

The body of the uterus has three tissue layers:

1. The perimetrium - consists of peritoneum.
2. The myometrium - thick muscle layer with bundles of smooth muscle fibres.
3. The endometrium - the lining of the uterus.

**Functions of the uterus**

1. To receive fertilised ovum, to nourish and protect it during development and to expel it at full term.
2. To play a role in the menstrual cycle.
