IMPACT OF COVID-19 AND SOVEREIGN DOWNGRADE ON SA GOVERNMENT DEBT

CABRI webinar: Managing public debt amidst COVID-19 financing pressures in Africa
Alilali Nelufule, National Treasury of South Africa
25 June 2020
SOUTH AFRICA WAS DOWNGRADED BY MOODY'S, FITCH AND S&P

- **2012**: Uncertainty around 2014 elections, social tension, low growth, wider CAD
- **2014**: Low growth, mining sector strikes, CAD rising, reduced fiscal space
- **2017**: Fiscal framework not credible, low growth, rising debt, heightened political uncertainty
- **2020**: COVID-19 related pressures on already strained growth and fiscus

**Africa's Long-Term Foreign Currency Credit Rating History 1994 - 2020**

- **2013**: Weak growth, widening twin deficit, strikes, political uncertainty
- **2015**: Widening twin deficits, rising debt, policy uncertainty
- **2017**: Weak public finances, policy uncertainty
- **2020**: Unsustainable debt, expected shock on finances & low growth due to COVID-19

**SUB-INVESTMENT GRADE**

- **2012**: Negative investment climate, rising debt, decrease in institutional strength
- **2014**: Weakening growth, negative climate, rising debt
- **2017**: Weak institutions, low growth, rising debt
- **2020**: Weak growth, unsustainable debt
Emerging market asset class impacted negatively during the COVID-19 crisis

Investors showed a risk-off mood.
- SA situation was exacerbated by sovereign ratings actions
- ZAR government bonds making an exit from the WGB index

SAGB’s yields weakened significantly

Longer dated fixed rate bond weakened by an average of 192 bps.
- The shorter dated bonds strengthened impacted by the SARB rate cut.
- The R208 bond (maturity Mar 2021) strengthened by about 180 pbs from Jan to March

Long-end inflation-linked bond yields are also weaker since January 2020.
- Short-dated inflation-linked bonds strengthened in line with near term inflation outlook.
DEMAND FOR PRIMARY AUCTION DECLINED

- Lower than average demand on SAGBs
  - Lower auction bid amounts
  - Lower subscription rates
Primary auctions allocated at higher yields

- Fixed-rate bond prices were on average at a 25 per cent discount
- i.e. government gets 75 cents for every R1 debt issued.
Consideration was to pursue shorter duration
- lower trading levels
- pressure on market players (PDs)

Refinancing risk also a concern
RAND WEAKENING

- The Rand has depreciated against the US Dollar since the beginning of the year
- The Rand remains highly volatile against the US$, but in line with other EM currency volatility
• The Rand was the second worst performing EM currency in the first quarter of 2020

- compared to the best performing currency against the US$ in fourth quarter 2019.
FOREIGN BOND YIELDS

- Compared to the weakening of 328 bps on 23 March 2020.
  - significant reduction when compared to the height of the COVID-19 risk in late March.

- The SOAF vs US Treasury average spreads have declined from high of 676 bps in March 2020 to the current 559 bps.
  - tighter levels since the COVID-19 crises seen early June.
  - Slightly wider this week after fears of a 2nd COVID-19 wave, and upcoming emergency budget.
NON-RESIDENCE HOLDINGS OF SOUTH AFRICAN GOVERNMENT BONDS (SAGBS)

- Foreign holdings of domestic government bonds fell to 24.6 per cent in April 2020.
- Nominal holdings decreased by R74 billion to R742 billion by April 2020.
- The uncertainty regarding global economic growth prospects in 2020 sparked capital markets volatility and outflows from emerging markets. SA government bonds yield weakening was exacerbated by credit rating downgrade and the exclusion of SA from the Citi World Government Bond Index (WGBI).
- WGBI estimated AuM US$796bn;
  SAGB weight 0.44%; US$3.4bn / ZAR 63bn
GOVERNMENT FUNDING OPTIONS

• Weekly Treasury bill issuance increased by R2.5 billion on 27 March 2020 to R10.4 billion and by R1.7 billion on 30 April 2020 to R12.1 billion.

• Delayed weekly government bond auctions due to increase market volatility, constrained liquidity and weaker bond yields.
  -Based on 2020 Budget the weekly fixed-rate bonds and inflation-linked bonds auction amounts increased from R4 530 million to R6 100 million and from R1 040 million to R1 400 million respectively.

*Risks to the market funding and borrowing costs*

• Further market uncertainty, volatility and lack of trading and funding liquidity
• Increase in issuance will add further pressure to the elevated cost of borrowing
• Further downgrades may also exacerbate the cost of borrowing
Non-Market Funding (Multilateral Development Banks-MDBs)

- The following is the summary of the initial responses from MDBs. The tenor is up to 35 years, includes grace periods. No conditionality post disbursements, reports to show how the funds were used.

<table>
<thead>
<tr>
<th>Institution</th>

<td><strong>Total</strong></td>
<td><strong>USD 5.07 billion (approx. R95 billion)</strong></td>
<td></td>
</tr>
</tbody>
</table>

- The funding costs are favourable relative to the market as the pricing is not based on the country risk premium. NT expressed interest subject to successful negotiations and internal approvals.
- Accessing this funding reduces fears of heavy issuance to fund government’s activities given massively reduced revenues collection

*Risks to the MDBs funding*
- South Africa is competing for funding with other countries
- The loan covenants and general conditions of the MDBs needs to be interrogated
CASH MANAGEMENT STRATEGY

• Cash pressures are forecasted for the second quarter and beyond. This could worsen substantially due to:
  ▪ COVID-19 tax relief measures and lower growth substantially resulting in reduction in tax revenues
  ▪ Weekly funding levels not fully realising currently
• Governments cash position over the medium term will need to be monitored closely, together with SARS, Tax Policy and Budget Office
  ▪ Short-term cash pressures to be covered by among others borrowing from the Corporation of Public Deposits (CPD) and use of sterilisation deposits
  ▪ The CPD might be constrained as provinces and SOCs withdraw their savings to address their cash requirements
  ▪ Further increase in Treasury bill issuance will be considered to the extent shortening duration is required
  ▪ Bond auctions to be increased further – associated borrowing cost to be considered
.....“We can no longer spend the way we were spending before. We can no longer do things we had hoped to do before. The situation has radically changed and we need to begin considering the zero-based budget system.

If we do not do this by 2024, our country will be in a situation where the debt to GDP ratio will be higher than the GDP of the country-we will be in a sovereign debt crises”-TT Mboweni(MP)

1. A positive value indicates that cash is used to finance part of the borrowing requirement.
