

# Session 3

Gender and Climate Change in Program  
Design and Appraisal: Insights from Benin

# Overview

- Introductions
- Select a rapporteur – to report back in plenary
- Introduction to the process when applying GCCIA
- Application to a hypothetical example
- Discussion on the methodology (5-10 min)

# The Process: GCCIA

- Guidelines for the session have been developed and were shared via email. They are also available on the event page.
- As a first step, we suggest you fill in column 2, agreeing in the group about the relative importance of each benefit. Try to spread your scores between 1 and 4 and not to score everything 4!
- Second, we suggest you work down the table row by row.
- If you finish all rows, you can do the maths, however the important part is the discussion and agreement.

# Discussion Questions

After applying the GCCIA methodology, please consider the following questions;

- Was the methodology easy to understand, was it user friendly?
- What changes to the approach/methodology would you propose if any?
- Could this be applied during the budget cycle? If so, at what stage of the budget cycle should the exercise be undertaken?
- Are there any lessons you can share concerning the application of the methodology to projects or programmes
